Subject: RE: Climax and gw

---

Welcome back. Send photos

I am going to bullet the Climax info – responding to you should also help me get this in order. The GW issue is Jim’s I’ll send the info to him. We were all surprised by the forest service new draft groundwater management plan and that it assumes that groundwater supports river flows. (If you have not seen the new plan – I sent it to Rose). Apparently our now retired GW expert had been working with the FS GW expert also retire but chose not to mention it to anyone.

BIKIS sent us some big documents and maps in January and I will try to send them – if I can’t I will have Tim set up an FTP site for us.

I do have a fair number of new documents from Colorado Health - the latest permits and rationales  
AND Colorado Mining – not all that useful but the maps from the past are interesting – you can access all of the Colorado mining docs on line – I’ll send info later

Julia has been talking to the Corps also – she may have additional information and I will forward your message asking her to fill you and me in

**Exemption 5 - Deliberative**

I [REDACTED]

I [REDACTED] it

I will try to figure out the best sharing mechanism next week.

**Subject:** Climax?

Hi Toney,

As you can see I’m finally back from my “maternity leave”. Were there any new developments related to Climax that I should be aware of?

Also – Russ mentioned you might have a case (not sure if you are handling it personally) related to the effect of GW withdrawals on streamflow (similar to the Rosemont mine in AZ)?! If so, just wanted to point your attention to a USGS publication from 2012 RE the effect of GW pumping on streamflow <http://pubs.usgs.gov/circ/1376/>

Let me know if you have any related question or if I could be of help in any way...  
Hadas
